## Humidity and Temperature Transmitter for HVAC Applications

The EE150 is a compact, accurate and reliable transmitter for HVAC applications, available with analog current or voltage outputs for relative humidity (RH) and temperature (T), as well as an optional passive T-Sensor output. It employs an E+E capacitive humidity sensor element with excellent long term stability and resistance against pollutants.

The compact IP65/NEMA 4 enclosure and the Ø 6 mm stainless steel probe minimize installation costs, while the PTFE filter cap provides outstanding protection against contamination. External mounting holes allow installation with closed cover, the electronics are protected against construction site pollution.

With an optional configuration kit and free software the user can set the output scaling and perform one or two point adjustment for humidity and temperature.
